

For buyers before a demo

A month, itemised by who can win it back.

This is what the reports look like. One measured month on a beverage line, then a single job on demo data, then what lands in your inbox each morning.

ONE LINE, ONE MONTH: 720 PAID HOURS

■ MEASURED

Each block is a share of the 720 paid hours; the table gives the same figures. The grey remainder is the rest of paid time, not itemised here.

LOSS	HOURS	SHARE	EVENTS	OWNER
■ Breakdowns	99.2 h	13.78%	417	Technician
■ Raw-material waits	97.8 h	13.58%	5	Planning · External
■ Interruptions (short stops)	54.6 h	7.58%	13,260	Operator
Rest of paid time	468.4 h	65.06%		Not itemised here

Augos platform, Production Timesheet · one anonymised beverage line · one month in 2026 · site, products and people removed.

How to read it

- ✓ **Three losses, three owners.** Breakdowns, raw-material waits and interruptions took 251.6 of the 720 paid hours. Each has a different person who can recover it.
- ✓ **Interruptions are counted, not guessed.** 13,260 short stops are too short to log by hand. The pulse sensor records each one, so they show as their own loss.
- ✓ **Every row opens to its stops.** The Downtime Report lists each event with its start, end, duration, reason, operator and planned or unplanned tag.
- ✓ **The owner column is the addition.** Standard OEE shows the loss. OEE+ adds who owns it, without changing the score.

On the demo, Augos walks through a month like this one on a line like yours, and shows each row down to the single stop.

One job, start to finish

The Job Card covers a single production run, bounded by the job rather than the clock. Its OEE is the product of three factors you can check.

What you get every morning

- The daily shift report email**
What each shift made and what stopped it. The shift record locks when the shift ends and arrives in your inbox, signed.
- The Pareto by hours**
Stop reasons ranked by total time lost, biggest cause first, so the first fix is the one worth the most hours.
- The uncoded-stop worklist**
Stops still waiting for a reason, ranked by hours and cut by operator, product and reason. Clear it daily so the record stays complete.

Every report draws on the same stops and reconciles to the same bottom line, down to the single event. Excel, CSV and an open API come with every line.
